Professional Summary

DevOps Engineer with 4.1 years of experience in designing, automating, and managing scalable infrastructure on **AWS Cloud**. Hands-on expertise in implementing **CI/CD pipelines** using **Jenkins**, **GitLab**. Proficient in **Infrastructure as Code (IaC)** using **Terraform** and **Ansible**, containerization with **Docker**, and orchestration with **Kubernetes**. Skilled in using **Git** for version control and **Prometheus/Grafana** for monitoring and alerting. Collaborated with cross-functional teams in **Agile/Scrum** environments to deliver high-availability, cost-effective, and secure cloud solutions.

Certifications:

- **AWS Solutions Architect (Certified in May 2023)**

Experience:

Tech Mahindra | From: April 2021 - Present

- Led the **orchestration and deployment** of scalable **cloud infrastructure** for a high-traffic e-commerce platform using **Terraform**, achieving a **reduction in downtime** and a **improvement in accessibility**.
- Architected and maintained **CI/CD pipelines** leveraging **Jenkins**, **GitLab**, and **Maven**, enabling fully automated build, test, and deployment processes across development environments.
- Administered and maintained **Kubernetes clusters**, deployed and scaled **Dockerized applications**, and managed container images using **Amazon ECR (Elastic Container Registry)**.
- Configured **GitLab-Jenkins integration** using **POLL SCM** strategy for continuous integration and scheduled job execution.
- Developed and managed **Infrastructure as Code (IaC)** using **Terraform**, ensuring consistent and version-controlled infrastructure deployments via **Git**.
- Configured and maintained **Amazon ECR** to store Docker images for streamlined CI/CD pipelines
- Conducted **disaster recovery simulations** bi-annually and created comprehensive **runbooks** to streamline incident response and recovery processes.
- Actively contributed to **Agile teams**, participating in **daily stand-ups**, **sprint planning**, and **retrospectives** to ensure iterative delivery and cross-functional collaboration.
- Authored detailed documentation for **configuration management**, **troubleshooting**, and **standard operating procedures** to support knowledge transfer and maintain operational integrity.

- Implemented **monitoring and alerting solutions** using **Prometheus** and **Grafana**, enabling proactive infrastructure health checks and reducing mean time to resolution (MTTR).
- Utilized **Ansible** for configuration management and automated provisioning, improving deployment consistency and reducing manual intervention by 40%.
- Secured AWS environments by applying **IAM best practices**, managing EC2 instances, VPCs, S3 buckets, and configuring security groups and access control policies.

Technical Skills:

- **Cloud Platforms:** Amazon Web Services (AWS), Microsoft Azure, EC2, S3, IAM, VPC, Route 53
- **Infrastructure as Code (IaC):** Terraform (modules, state management), Ansible (playbooks, roles)
- **Containerization & Orchestration:** Docker (Dockerfile, Docker Compose), Kubernetes (kubectl, Helm, deployments, services)
- **CI/CD Tools:** Jenkins (pipeline scripts), GitLab CI/CD, Maven, SonarQube, Nexus, JFrog Artifactory
- **Version Control & SCM:** Git, GitHub, GitLab (branching strategies, merge requests, hooks)
- **Monitoring & Logging:** Prometheus, Grafana, CloudWatch, ELK Stack (basic knowledge)
- **Operating Systems:** Linux (Ubuntu, CentOS), Shell scripting, Bash
- **DevOps Practices:** Agile, Scrum, Kanban, Sprint Planning, Daily Stand-ups, Retrospectives
- **Project Management & Boards:** Jira, Azure Boards, Confluence
- **Security & Access Control:** IAM policies, Key Management Service (KMS), Security Groups

Project #1

Project Name: **CART CLOUD**

Role: DevOps Engineer
Duration: Oct 2023 - Present
Technologies: Git, Jenkins, Maven, SonarQube, Docker, Kubernetes, ECR, JFrog, Prometheus, Grafana

Description:
Developed end-to-end CI/CD pipeline for cloud-based applications. Implemented Git-based version control and triggered automated Jenkins builds using POLL SCM. Integrated SonarQube for code quality analysis and JFrog for artifact management. Containerized apps with Docker, deployed via Kubernetes with custom manifest files. Monitored system health with Prometheus and Grafana dashboards.

- Created and managed Git repositories, tags, and branches.
- Configured Jenkins pipelines and Maven build scripts using pom.xml. Migrated legacy artifact repositories to Nexus, reducing build failures and improving dependency resolution speed by 30%
- Automated cleanup policies in Nexus to manage storage efficiently and remove outdated snapshots
- Collaborated with development teams to define artifact versioning strategies and enforce naming conventions via Nexus repository rules
- Ensured code quality using SonarQube.
- Deployed Docker containers to ECR and orchestrated with Kubernetes.
- Monitored application and infrastructure using Prometheus and Grafana.

Project #2

Project Name: **Bombardier Canada**

Role: DevOps Engineer
Duration: May 2022 - Sept 2023
Technologies: Terraform, AWS (EC2, S3, VPC), GitLab, Jenkins, Ansible, DynamoDB

Description:
Automated AWS infrastructure provisioning using Terraform. Created reusable modules and integrated with Jenkins pipelines. Leveraged Ansible for configuration management. Managed Terraform state in S3 with state-locking via DynamoDB.

- Provisioned cloud infrastructure (EC2, S3, VPC) using Terraform.
- Developed reusable Terraform modules and implemented best practices.
- Automated deployments with Jenkins pipeline integration.
- Maintained state files in S3 and locked state changes with DynamoDB.
- Reduced manual effort and increased team efficiency by 60%.

Academic Experience:

Bachelor of Technology (B.Tech), Raisoni College of Engineering, Nagpur | CGPA: 8.02
